

Digital Taiwan SuperTour Web System

Challenges

- Contents of the system
- Quality, richness and accuracy

Goals

- Attract more students and general users
- Interact with the nature

Digital Taiwan SuperTour Web System interface

Scenario

This system is sponsored by the National Science Council and cooperated by SuperGeo Technologies Inc. and the Department of Geography of National Taiwan University. Geographic Information System skills are mainly used to set up this tour web. The content focuses on national parks, trails for mountain climbing and introductions of natural animals and plants.

Challenges

The main challenges of this system are not how to set up the system but the displayed contents of the system. The contents are collected by trained students who are responsible for surveying, recording, positioning and photographing, so the quality, richness and accuracy of this system are the factors that this system has to pay attention to.

Goals

By successfully setting up this system, students not from the Department of Geography of the National Taiwan University and other people who are interested in travel routes can also be attracted to complete a standard education training on this site. The training content will include learning GIS directly and having more chances to interact with the nature.

Solutions

This system uses SuperWebGIS as the main platform and Google maps for additional map data references.

Results

After setting up this system, users can easily browse related travel places by the Internet. There are texts, pictures, videos and audio clips in the system to increase its richness and attractiveness. This system can attract users away from the traditional tour guidebooks to an online tour web.

There are texts, pictures, videos and audio clips in the system to increase its richness and attractiveness. Landmarks help users to clearly know the positions of scenic spots.

Solutions

- SuperWebGIS with Google map for additional map data

Results

- Browse travel points by Internet
- Tour guide combines texts, pictures, videos and audio clips

Products

- SuperWebGIS 2
